

Twist Wall System

Twist available in curved or straight walls.

The Twist banner bridges the gap that exists between pop-up display systems, pole and panel, and banner stands; a system where both form and function have been specifically considered to bring flexibility, ease of use and stability.

Aimed primarily at the exhibition, conference and retail sectors, the original Twist banner is linkable through our Easilink or Flexilink kits and can create seamless graphic layouts over multiple panels due to its patented tensioning system. This not only ensures a taut graphic, perfect alignment and ease of use, it also allows you, the user, to create and recreate virtually any stand or display configuration you may require.
